NFT Smart Contract Developer

NFT Smart Contract Developer

We are ClubRare - The World's first community-centered Physical NFT marketplace for collectors. We connect the Real-world and the Metaverse. We are a community for people who trade the things we love.

We are a fully remote company with no fixed headquarters. The team is distributed throughout the world - we form an inclusive network across a variety of locations, lifestyles, and backgrounds.

Our culture is driven by empathy, integrity, strategic thinking, innovation, leadership, and the shared desire to perform at our peak. While our differences make us adaptable and versatile, it's our shared values that give us the strength and drive to become the open metaverse for collectors.

What's in It for You?

- Be part of building a great project and make a real impact in your career.
- Work flexible hours from anywhere and be part of a team that is driven by strong values and a clear shared vision.
- Directly shape the future of a completely new model for cryptocurrency and blockchain applications.
- Challenge your skills and push your creative limits working with the latest technologies & systems.
- Play an active role in one of the most significant technological innovations in human history.
- Receive a competitive salary paid in crypto.

Your Impact

We are looking for a Blockchain Developer or a Smart Contract developer to join our technology team. Our ideal candidate will have to understand the value of clear and performant code as well as want to define the leading solution. They will relish the opportunity to build a new category of computing platform and desire to build a thriving open source ecosystem. You will have demonstrated expertise with distributed infrastructure development, as well as the curiosity and creativity to explore new approaches to complicated problems. Most importantly understand the value of a developer-friendly infrastructure while breaking new ground in a quickly-evolving space.

Your Impact

We are looking for a Blockchain Developer or a Smart Contract developer to join our technology team. Our ideal candidate will have to understand the value of clear and performant code as well as want to define the leading solution. They will relish the opportunity to build a new category of computing platform and desire to build a thriving open source ecosystem. You will have demonstrated expertise with distributed infrastructure development, as well as the curiosity and creativity to explore new approaches to complicated problems. Most importantly understand the value of a developer-friendly infrastructure while breaking new ground in a quickly-evolving space.

Responsibilities:

- Explore design implications around smart contracts and their interactions with each other.
- Work with the Product team to explore feasibility and design of the decentralization of various processes.
- Take ownership from the ideation phase to deployment and management.
- Develop host and back-end systems for our NFT minting projects and the marketplace platform.
- Optimize web applications for maximum performance across a variety of devices including desktops, tablets and smartphones
- Build reusable components and libraries to speed up development efficiency
- Collaborate with your team to guarantee streamlined implementation of applications

Requirements

- Experience in NFT marketplaces and/or decentralized cryptographic systems.
- 3+ years of experience coding with Solidity and utilizing the blockchain platform's library (e.g Web3.js for Ethereum).
- Bachelor/Masters degree in computer science, engineering or equivalent industry experience.
- Proven track record of delivering projects with high quality, maintainable code
- Focused on delivering impact and results to the makers and consumers who will benefit from this new ecosystem.

We are committed to creating a diverse environment and are proud to be an equal opportunity employer. All qualified applicants will receive consideration for employment without regard to race, color, religion, gender, gender identity or expression, sexual orientation, national origin, genetics, pregnancy, disability, age, veteran status, or other characteristics.

Blockchain Engineer

Featured Job Opportunity

Blockchain Engineer (m/f/d)

at holoride GmbH

We are an Audi-backed, multi-award-winning startup working at the intersection of mobility and Extended Reality (XR). By synchronizing the contents of XR devices with external influences such as acceleration, steering, and navigational data, we are creating a never-before-seen passenger experience.

In order to supercharge this never-before-seen passenger experience our cryptocurrency, named RIDE token, will be essential in building a vibrant and sustainable economy for the holoride ecosystem, connecting car manufacturers, content creators, brands, and passengers and enabling them to capture value along the way.

Based in the heart of Munich, we're looking for a **Blockchain Developer** to support and design blockchain technology around our business model, and ultimately, become part of the holoride family.

Job Description

As a Blockchain Developer, you will be the main responsible for designing, implementing, and developing smart contracts and their integration into our tech stack as well as researching and developing and testing further blockchain technologies (with a focus on the Elrond network). You will connect with key stakeholders, technical partners and the wider community to brainstorm and evaluate potential new tools and technologies to keep up to speed with current trends, technologies and cryptography methods as they continually evolve. You will apply both researched information and your own knowledge to support in the protection of digital transaction data from any potential threats.

Your profile

Bachelor's/Master's degree in computer science, IT, or equivalent experience

High proficiency in Rust programming language

Experience working with different PaaS solutions offered by Azure, AWS, and other such cloud platforms

Good understanding of common algorithms and data structures

Familiarity with cryptography, cryptocurrencies, NFTs and P2P networks

Experience in the design, testing, coding, and maintaining of smart contracts (whether on Ethereum or another network)

A high-level understanding of game theory

Bonus qualifications

Knowledge in high level programming languages like Solidity

Proficiency in one (or more) of the additional web-assembly supported languages: C++, Java, JavaScript, Python

Senior Smart Contract Developer

Senior Smart Contract Developer at Braintrust

Braintrust is the first decentralized Web3 talent network that connects skilled, vetted knowledge workers with the world's leading companies. The community that relies on Braintrust to find work are the same people who own and build it, ensuring the network always serves the needs of its users, instead of a centrally-controlled corporation. And because the community of knowledge workers and contributors earns ownership and control of Braintrust through its native BTRST token for their contributions to the network and its growth, new Talent and jobs have participated in the network at record speeds.

Braintrust has over 700,000+ community members, with knowledge workers and project contributors across the world. Braintrust is trusted by hundreds of Fortune 1000 global enterprises including Nestlé, Porsche, Atlassian, Goldman Sachs, and Nike. For more information, visit: www.braintrust.com.

BTRST is available on Coinbase.com and in the Coinbase Android and iOS apps. Coinbase customers can trade, send, receive, or store BTRST in most Coinbase-supported regions. For more information on Braintrust and the BTRST token, read the "Braintrust: The Decentralized Talent Network" whitepaper.

Job Description

JOB TYPE: Freelance, Contract Position - No agencies (See notes below)

LOCATION: Remote (TimeZone:)

HOURLY RANGE: Our client is looking to pay \$90 - \$135 USD / HR

ESTIMATED DURATION: 40Hrs/Week - Long Term

ABOUT US:

Braintrust is the only network that gives in-demand talent all the freedom of freelance with all the benefits, community, and stability of a full-time role. As the first decentralized talent network, our revolutionary Web3 model ensures the community that relies on Braintrust to find work are the same people who own and build it through the blockchain token, BTRST. So unlike other marketplaces that take 20% to 50% of talent earnings, Braintrust allows talent to keep 100% of earnings and to vote on key changes to improve the network. Braintrust is working to change the way freelance works – for good.

About the Role

First few deliverables

1. Build a Smart Contract that distributes NFTs to stakers
2. Conversion of veCRV locking contracts into accepting NFTs

Requirements

- o Solidity and Web3 stack experience, i.e. Brownie, Truffle, etc....
- o Python
- o Javascript

ABOUT THE HIRING PROCESS:

Qualified candidates will be invited to do a screening interview with the Braintrust staff. We will answer your questions about the project, and our platform. If we determine it is the right fit for both parties, we'll invite you to join the platform and create a profile to apply directly for this project.

C2C Candidates: This role is not available to C2C candidates working with an agency. But if you are a professional contractor who has created an LLC/corp around your consulting practice, this is well aligned with Braintrust and we'd welcome your application.

Braintrust values the multitude of talents and perspectives that a diverse workforce brings. All qualified applicants will receive consideration for employment without regard to race, national origin, religion, age, color, sex, sexual orientation, gender identity, disability, or protected veteran status.

Solidity Developer

Solidity Developer at Mancium

Mancium is a token that allows you to participate actively in the MANC ecosystem, which is growing very effectively and successfully at a great rate. Mancium will be used in in-app game purchases, and will have a number of further benefits for its holders. It will be the only token that will allow the purchase of many items and features in MANC's applications. Those users who hold their Manciums during particular scheduled periods will be provided with even further advantages such as stake interests and bonuses. Another benefit Mancium holders are provided with is the opportunity to join MANC Academy. Besides MANC Academy candidates, Manciums will be used by those users interested in metaverse. Meta versions of MANC games applications will be available only to Mancium holders and holders of Mancium-related NFTs. To be a part of the future, act now!

Job Description

Mancium is looking for a solidity developer to join an international agile and product team where you will be in charge of delivering solidity smart contracts and dapps to a diverse set of users.

Responsibilities:

- Interpret client requirements to the blockchain architect and lead smart contracts development.
- Develop features and augmentations in a stable, tested, and efficient way.
- Develop solidity code engineering on client platforms.
- Review the technical reviews of the products.
- Take care of blockchain integration with existing applications.
- Collaborate with multi-disciplinary teams, product managers to brainstorm the latest technologies and applications.
- Conduct blockchain research, design, development, and testing on the Ethereum network.

- Take care of blockchain integration with existing applications.
- Collaborate with multi-disciplinary teams, product managers to brainstorm the latest technologies and applications.
- Conduct blockchain research, design, development, and testing on the Ethereum network.
- Using Solidity, create proprietary blockchain technology (services, libraries, and algorithms).
- Create and deploy high-security technologies (Services, libraries, Algorithms).
- Creating novel, reusable, tested, and efficient code to develop and support blockchain systems.
- Daily, shipping features both on the front end and the back end.
- Working with a product manager, designer, and engineers to plan and collaborate on features.
- Implementing prototype/testnet versions of smart contracts.
- Evaluation of different blockchain implementation to fit the needs of our product.
- Working on the project until production, including the launch of the mainnet.
- Designing, developing and deploying Solidity smart contracts.
- Working closely with development teams for trouble-shooting.
- Writing technical documentation.
- Maintaining source code and troubleshooting systems.

Qualifications:

- Bachelor's/Master's degree in computer science, engineering, statistics, Mathematics, or relevant field.
- 2+ years of experience as a technical architect in blockchain projects or Solidity (rare exceptions made based on skill-level).
- Working experiences on different blockchain platforms, like Hyperledger, Ethereum, Corda, and Bitcoin.
- Hands-on experience in blockchain architecture and its applications.
- Efficiency in open-source platforms, like Hyperledger, Composer, Truffle, Neo, etc.
- Ability to explain the blockchain concept and its feasibility.
- Understanding of Smart Contracts and consensus techniques, as well as experience developing blockchain apps or proofs-of-concept (POCs) in Solidity on Ethereum.
- Hands-on development expertise in the following areas: Solidity, JavaScript, node.js, and JSON.
- Must have a strong interest in blockchain technology and like learning and developing new and inventive methods to leverage smart contracts on the Ethereum network.
- Understanding of Blockchain architectural design patterns as well as supporting infrastructure.
- Knowledge of ERC20, ERC721, and other protocols.
- In-depth knowledge of blockchain logic.

Senior Developer

ZAUBAR

Senior Developer (Metaverse & NFTs)

Berlin, Germany Employee Software / Web Development

This goes out to everyone who wants to push things forward.

We are inventing a new kind of urban experience: immersive explorations powered by location-based augmented reality that is social, fun and meaningful. At ZAUBAR, we're taking the metaverse to the streets!

Right now, we're partnering with some of Germany's most interesting cultural institutions, luxury brands and hotels, media houses and tour operators to make immersive tours a reality. Our specialty are time travel experiences.

Soon, we're enabling anyone to create, distribute & monetize these experiences with the ZAUBAR Creator platform.

The founders and team have a deep background in AI, tech art, history and journalism.

We're looking for a seasoned developer with experience shipping and maintaining multiple apps.

You enjoy solving complex device and game platform problems where you can exercise your practical technical knowledge.

You also effectively collaborate with others to provide technical expertise on identified issues.

As a small team where the code you write gets deployed fast, you'll be responsible for the development, testing, and code quality.

This role requires a high level of ownership over the product code and working closely with the team.

You'll also be working with the creative and product teams to plan new features and prioritize problems and opportunities.

To set you up for success, we provide everything you need within our dynamic and employee-centric company structure.

Full responsibility and ownership of your work - you're making time travel possible!

ZAUBAR is an award-winning startup based in Schöneberg, Berlin. We have high-growth traction, unique technology and a passionate team. Let's meet in the future!

Tasks

- You conceptualize and execute the architecture of an AR platform targeting creators and consumers. This is your baby.
- You implement a variety of gameplay mechanics and client/server components
- You optimize performance for mobile devices (iOS, Android, AR Glasses)
- You work with our ML engineers to develop production-ready, specialized and interactive computer vision models and deploy them on cloud infrastructure
- You set up a QA pipeline for mobile and web apps
- You integrate blockchain and NFT technologies
- You review pull requests & contribute to the growth of the team
- You work closely and communicate openly with engineers, designers and the founding team (SCRUM)
- You proactively train yourself to remain at the forefront of augmented reality development
- You are part of a developer team and able to mentor new developers
- We're working with various technologies. You don't need to know them inside out but have a passion to acquire knowledge as needed (Unity, native app development, Jenkins, GCP, Flutter, WebGL, basic web technologies)

Requirements

- 5+ years experience
- You shipped multiple products
- You're passionate to learn what you don't know yet
- You are a super open and a friendly person
- You solve problems until they are done.

Benefits

- Low hierarchy
- Substantial equity (up to CTO level)
- Team events (VR, AR scavenger hunts, meetups, bicycle rides, parties)
- Flexible work times
